

Irbil Ifraz Water Plant: Services About 300,000 of Irbils Population

Nestled in a valley surrounded by farmlands and snow-sprinkled mountains in the background, the Irbil Ifraz Water Plant was completed last summer and handed over to the Ministry of Water.

The water plant currently processes about 6,000 cubic-meters-per-hour of raw water into potable form for distribution to approximately 300,000 Irbil residents.

This facility has a maximum capacity to process and distribute 10,000 cubic-meters-per-hour of potable water. Two other water treatment and distribution plants in the Irbil area support the remainder of its population of approximately 1 million people. According to U.S. Army Corps of Engineers-Gulf Region North and plant officials, this facility also meets World Health Organization Standards.
